PROFESSIONAL SUMMARY

Full-stack engineer with an MSc in Computer Science (Distinction) from the University of Birmingham and 2+ years of enterprise experience at LTIMindtree on the Microsoft team. Core stack is TypeScript, React, Next.js, Python, Node.js, and C#/.NET. Recently shipped multiple production AI applications independently spanning backend agents, REST APIs, and full frontends with end-to-end ownership from architecture to deployment.

EDUCATION

University of Birmingham

MSc, Computer Science - (Distinction)

Sept 2024 - Sept 2025
Birmingham, United Kingdom

Dayananda Sagar Academy of Technology and Management

Bachelor of Engineering, Electronics and Communication - (GPA: 8.06)

Aug 2018 - July 2022
Bangalore, India

SKILLS

Languages: JavaScript, TypeScript, C#, Python, C++, Java

Frontend: React.js, Next.js, Angular, HTML5, CSS3, Tailwind CSS

Backend: Node.js, .NET, Flask, FastAPI, Spring Boot, Entity Framework, SignalR, Apache Kafka

AI/ML: Google Gemini API, NLP, sentence-transformers

Databases: PostgreSQL, SQLite, SQL Server, MongoDB

DevOps & Tools: Docker, GitHub Actions, CI/CD, Git, Vercel

Testing: JUnit, Mockito, Jasmine, Karma

Methodologies: Agile, Scrum, OOP, Microservices

WORK EXPERIENCE

LTIMindtree

Software Engineer I

Sept 2022 – Sept 2024
Bangalore, India

- Identified inefficiencies in the manual SQL to C#/.NET test case migration process while working on Microsoft's internal query processing team, and spearheaded the development of an automated one-click migration tool in C#/.NET and React, cutting manual processing time by 50% and eliminating error-prone multi-step workflows across the team.
- Validated the tool at scale by migrating 500+ legacy SQL test cases to C#/.NET, achieving 100% functional parity and significantly improving test suite maintainability across Microsoft's internal codebase.

LTIMindtree

Software Engineer Intern

Mar 2022 – May 2022
Bangalore, India

- Built full-stack features across internal web applications using Java, Spring Boot, .NET, Entity Framework, Angular, and JavaScript during a 3-month program.

PROJECTS

Sentinel-G3 - Autonomous Self-Healing Security Auditor (Built for Gemini 3 Hackathon) | [GitHub](#) | [Live](#)

- Autonomous security auditor that identifies, patches, and verifies vulnerabilities using Gemini 3 agents, opening GitHub PRs with fixes automatically. Built with FastAPI, Next.js, and real-time streaming with cryptographically signed audit trails.

IssueTracker - Multi-Tenant Issue Management SaaS | [GitHub](#) | [Live](#)

- Designed a production-grade multi-tenant issue tracker with database-level workspace isolation using Prisma extensions and PostgreSQL, JWT auth, RBAC, and a Next.js 15 frontend with lazy-loaded route splitting.

StudySync - Smart Study Partner Matcher | [GitHub](#) | [Live](#)

- Awarded Public Choice Award at Birminghamhack 1.0. Architected a full-stack web application using Python (Flask) for the backend and React.js for a dynamic frontend. Engineered a matching algorithm using cosine similarity on numerically encoded user preferences to generate and rank compatible matches.

FraudDetectionSystem – Real-Time Financial Fraud Detection | [GitHub](#)

- Architected a distributed fraud detection system using .NET 9, Apache Kafka, FastAPI, and React. Ingested transaction streams via Kafka, scored risk through a Python ML engine, and pushed live alerts to a React dashboard via SignalR.

PromptGuide - Intelligent Prompt Evaluation Tool | [GitHub](#) | [Live](#)

- MSc dissertation project - built a multi-platform prompt evaluation toolkit across VS Code and Chrome extensions, using Flask, NLTK, sentence-transformers, and Groq API for AI-driven refinement, with a TypeScript linting engine for offline diagnostics and token budgeting.

EXTRACURRICULAR ACTIVITIES

- MSc Student Representative & Member of CS Society (CSS) and Ethical Hacking Society (AFNOM), University of Birmingham** - participated in technical workshops, hackathons, and cybersecurity challenges.
